

Lap Band Medications

Lap Band Medications

For patients who have undergone the lap band procedure, what is the outlook for them regarding Lap Band and Medicines once they are in the post-surgery stage?

A lap band specialist will help individuals to decide whether medications for blood pressure, diabetes, and other illnesses can be stopped when the conditions for which they are taken improve or go away after lap band surgery.

For medications that lap band surgery patients will continue needing following the procedure, the vast majority can be swallowed, absorbed, and work just like they did prior to lap band surgery. There is normally no change in dosage required when it comes to Lap Band and Medicines.
